Subject: Northern Powergrid CLNR Project Feedback

Dear Nisha

I understand that you are actively seeking feedback in relation to the Low Carbon Network Fund projects and although we were not directly involved in any of these and therefore unable to respond to your formal consultation we wanted to express some support for the Customer Led Network Revolution project delivered by Northern Powergrid under this scheme.

As an SME developing new smart home technology and working on a number of Innovate UK led research and development projects we have been following this particular project closely over the last few years and have attended some of the events. We followed the DSR trials with interest since they are closely related to some technology we have been trialling elsewhere and have found the outputs useful in developing our ideas further.

In fact the project has led to Northern Powergrid working with us on a project to develop some of the learning further and we hope that our GenGame trials will lead to real customer improvements and business opportunities. We are very pleased to be working with Northern Powergrid on the project to trial our technology at scale in the North of England.

Yours Faithfully

Adrian Coe
Managing Director
