Open letter: Charging arrangements for embedded generation

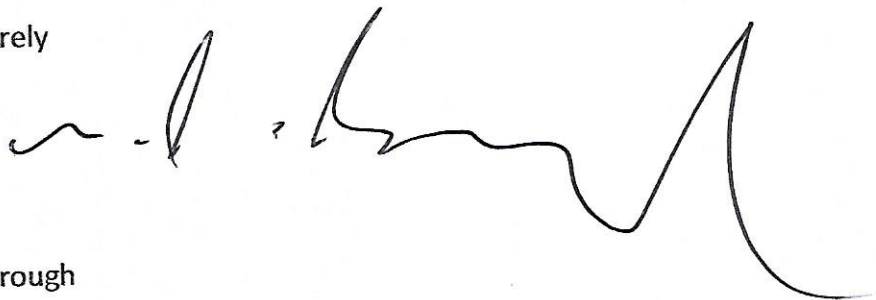

Dear Ms Warburton

You have invited stakeholders to comment on your open letter detailing the transmission network charging arrangements for embedded generators

Snowdon Energy Ltd is a farm based producer of energy by anaerobic digestion. We have invested considerably in response to the perceived requirement for the UK to produce more energy sustainably. It seemed to us to make sense to enter the renewables market.

However we are very concerned that yet another change is proposed to our income stream, this time to end triad payments. There has to be some recognition that small independent generators need this triad income as removal of it will have a significant impact. We have just invoiced for the triad periods during last winter and it amounted to £32k but we realise that this sum wouldn't seem much to the large corporate generators, it is significant to us. AD plants provide reliable, round the clock electricity to help ensure UK energy supplies can meet demand. Please help the sector to continue with this supply by keeping triad payments.

Yours sincerely
