Proposal summary (short summary, suitable for published description on our website)

Expand Schedule 3 of the Rules to include technology classes for renewable energy generators which are not in receipt of a Low Carbon Exclusion as defined under Regulation 16.

What the proposal relates to and if applicable, what current provision of Rules the proposal relates to (please state provision number):

The proposal relates to the addition of technology classes such as onshore wind and solar to the listed Generating Technology Classes in Schedule 3.

Description of the issue that the change proposal seeks to address:

Now that certain established renewable technologies such as onshore wind and solar are no longer able to receive low carbon support, these forms of generation will qualify to participate in the Capacity Market. The Rules need to be expanded to accommodate them.

If applicable, please state the proposed revised drafting (please highlight the change):

Including Onshore Wind and Solar (and other relevant renewable technologies) in the Technology Generating Classes of Schedule 3

Analysis and evidence on the impact on industry and/or consumers including any risks to note when making the revision - including, any potential implications for industry codes:

The addition of renewable generation into Schedule 3 will expand the range of technologies participating in the Capacity Market, furthering the commitment to a technology agnostic security of supply whilst helping the UK meet its carbon reduction commitments.

Details of Proposer *(please include name, telephone number, email and organisation):*
