Proposal summary (short summary, suitable for published description on our website)

Clarification of definition of QMEij in Rule 8.5.2

What the proposal relates to and if applicable, what current provision of Rules the proposal relates to (please state provision number):

The current definition of QMEij in Rule 8.5.2 is too narrow

Description of the issue that the change proposal seeks to address:

The definition of QMEij in Rule 8.5.2 refers to CMUs providing Relevant Balancing Services. The definition is referenced elsewhere (8.6.1) and used to determine delivery performance against obligations for all generating CMUs connected to the Transmission System. The definition should be changed so as not to refer to CMUs providing Relevant Balancing Services.

If applicable, please state the proposed revised drafting (please highlight the change):

In 8.5.2: QMEij is the aggregate of the "Period Expected Metered Volume" (as defined in in the BSC) for each BM Unit "i" comprised in the CMU in SettlementPeriod "j";

Analysis and evidence on the impact on industry and/or consumers including any risks to note when making the revision - including, any potential implications for industry codes:

The current definition of QMEij refers to CMUs providing Relevant Balancing Services, which is not necessary to determine QBSCCCij, as this only relates to those units. The definition is also used elsewhere (8.6.1) to determine delivery performance, where the current definition of QMEij is too narrow.
