of settlement. A number of smaller parties who have entered the Balancing Mechanism will have altered their meters from non-CMRS to CMRS, but may subsequently discover that the BM software used by NG does not despatch smaller plants. They may therefore wish to leave the BM and their meter registrations will alter. In the coming years, it is hoped that BM Lite (being developed under modification P355) will facilitate smaller parties joining the BM, or a parallel market, which would alter their meter registrations. As CMRS/non-CMRS simply tells EMR Settlement where the metering data is located in the settlement systems, there seems to be no good reason why it cannot be altered as the meters themselves will not change and will still be verified BSC settlement meters. A change notified to Delivery Body would need to then be notified to EMR Settlements so that the	Proposal for a Capacity Mark Rules Change	xet	OfgemMaking a positive difference for energy consumersReference number (to be completed by Ofgem): CP308

meter change can be tracked, but the inability to alter the classification is limiting a party's			

commercial freedom in the rest of the market when the CM simply needs to know where to find the meters.

We would note that this is not likely to impact many meters as there are not currently many sites who would want to make the change between being BMUs and being supplier registered. However, we feel the commercial freedom to change the way parties interact with the wholesale energy market will be more important in future and note that NG as SO are hoping that more parties will join the BM and the current rules do form a barrier to that.
