Dear Paul

ICoSS consultation response on Network Output Measures

The Industrial and Commercial Shippers and Suppliers (ICoSS) group is the trade body representing non-domestic industrial and commercial (I&C) suppliers in the GB energy market. Members collectively supply three-quarters of the gas needs of the non-domestic sector as well as half of the electricity provided by non-domestic independent suppliers¹.

Please find below our consultation response regarding the proposed Network Output Measures methodology (covering asset health, criticality, and risk).

We are generally supportive of the Ofgem proposals, and believe that it should ensure a robust process to ensuring that network performance is appropriately measure in these areas. A feature of the proposed methodology is that it places great reliance on accurate reporting on the network organisations. Whilst we are confident that Ofgem will challenge any unclear or obviously incomplete data provided, there seems to some value in having independent oversight of the original data collation and submission by the transporter to ensure that it is complete and consistent.

Please contact me if you wish anything further regarding our response

Yours sincerely
