**Subject:** RE: Electricity unit rates on time of day basis - Query: Paul Keasley - update [OFFICIAL ]

Dear Paul

Further to my last communication, below, a quick note to let you know that we will log your email as a response to the consultation and also consider your thoughts as part of our wider decision-making process.

We have, in addition, forwarded your comments to our teams who are managing our Half-Hourly Settlement and Future Retail policy areas.

Thank you again.

Best regards

Sylvia

**Subject:** Fwd: Electricity unit rates on time of day basis - Query: Paul Keasley [OFFICIAL ]

Further to my previous email. I think the point I am trying to put over is raised on the RII0-2 Framework consultation, page 123, para 1.11. Half Hourly Settlements (HHS). If this could be fast tracked, I think it would have a positive effect on the demand side. Especially as I believe there will be an explosive growth in the take up of electric company cars due to the proposed drop in the BIK rate of tax from 16% to 2% in 2020/21.

Regards

Paul Keasley

Thank you for your response. My suggestion was more of a general input for you to consider while you are carrying out the review. It is certainly an innovative restructuring of the revenue stream to smooth out the excessive peaks and troughs that cause expensive and dirty forms of electricity production to be brought into play. This won't suit everyone but I'm sure there must be others like me who are prepared to shift their load if the price was right.

I'm not sure if I have aired my suggestion to the right organisation.  
One never knows who to talk to. But please feel free to forward my suggestion to any organisation you feel would be appropriate.

Regards Paul Keasley.

Dear Paul

Thank you for your query.

Please may I check if this is in relation to being your response to our recently published RIIO-2 Framework Consultation or if this is general query? (RIIO-2 Framework Consultation - more information: <https://www.ofgem.gov.uk/publications-and-updates/riio-2-framework-consultation>).

This will help me to direct your query to the right team to respond accordingly.

Thank you and looking forward to hearing from you.

Best regards

Sylvia Da Silva

Subject: Electricity unit rates on time of day basis.

Can suppliers be encouraged to offer those with smart meters hourly rates based on time of use. That way peak electricity that cost the suppliers much more can be charged out at much higher rates. Conversely off peak electricity can be charged at much lower rates.

That way the demand on the grid can be smoothed and the peaks and troughs would not be so steep.

Regards Paul Keasley.
