

FAO James Norman

I am mailing you as a shareholder of Energy Isles Ltd. My company is Skaw Investment Company Ltd and I feel that the 600MW link proposed is not suitable. It would be more realistic and beneficial to develop plans for a 1000MW link, or if this is not possible, at least an 800MW link.

There is already 801MW of onshore wind development in Shetland, so 600MW does not meet current demand, and would not allow room for development, including other technologies such as tidal.

There is Viking Energy's 457MW, 49MW and 72MW with planning for Mossy Hill and Beaw Field; planning application submitted for Energy Isles on Yell; 10MW of other projects with planning and 12MW operating. This totals 801MW. There is also 0.5MW tidal.

It would be very beneficial to the future of the Shetland Islands that Ofgem recommends developing a 1000MW in the first instance, or if not an 800MW option and takes a decision later in 2019.

Yours sincerely

John Gilbert Priest
