

Dear James Norman

29/05/19

As a shareholder in Energy Isles Ltd. and Shetland Aerogenerators Ltd. It has been brought to my attention the proposed HVDC link is insufficient for the consented and pending windfarms in Shetland.

I was born and brought up in Yell's neighbouring isle of Unst. I left to train in Edinburgh over fifty years ago due to the lack of work opportunities in Unst at that time.

It is my hope that this project would create quality employment opportunities for the next generation in a remote area if it goes ahead.

There is evidence that indicates global energy supply needs to be decarbonised.

I support a bigger HVDC link to Shetland.

Therefore, I feel the current proposal for the 600MW link is too small and I would like to see the link increased to >1000MW to maximise Shetlands contribution to cleaner energy and also to reduce the cost to UK consumers.

I ask that you consider the larger cable.

Yours Sincerely
