Dear Stakeholders,

# Decision on modifications to the ESO regulatory and incentives framework for 2020-21

This letter sets out the Authority's decision to modify the Electricity System Operator's (ESO) regulatory and incentives framework for 2020-21. Alongside this letter, we have published updated guidance documents<sup>1</sup> to support and implement the changes to the ESO regulatory and incentives framework for 2020-21.

This letter explains our proposals and the changes we have made in response to the views stakeholders shared with us through our recent consultation. These changes will take effect from 1 April 2020 and will apply to the regulatory year 2020-21<sup>2</sup>.

#### **Background**

The ESO regulatory and incentives framework was introduced in April 2018. It was designed to encourage the ESO to work flexibly with its stakeholders in order to maximise consumer benefits across the full spectrum of its activities. The framework is built around us being clear from the outset about the behaviours and outcomes we expect of the ESO; but it places the onus on the ESO to engage with stakeholders to identify how to best meet and exceed these expectations. It includes:

 A set of 'Roles and Principles' designed to set clear expectations about the baseline behaviours we expect from the ESO;

<sup>&</sup>lt;sup>1</sup> The Roles and Principles guidance document and the ESO Reporting and Incentives (ESORI) guidance document.

<sup>&</sup>lt;sup>2</sup> For clarity, these changes will apply to the ESO's Forward Plan and Ofgem Formal Opinion for 2020-21, the ESO's mid-year review in 2020-21 and the ESO's end of year review in 2020-21.

- A requirement on the ESO to engage with its stakeholders each year to produce a
  Forward Plan, which will include performance metrics and should demonstrate how it
  will meet our expectations and add additional value for consumers;
- Regular performance reports published by the ESO;
- A ESO Performance Panel, which will challenge the ESO on its plans, evaluate its performance and make recommendations to the Authority;
- A decision by the Authority at the end of each year to financially reward or penalise the ESO up to a maximum cap and floor of ±£30m, informed by the panel's recommendation, as well as other evidence collected throughout the year.

The ESO Roles and Principles guidance document supports the framework by describing the ESO's key activities and setting out our expectations for how these activities should be performed. It therefore should inform the ESO's forward plans and performance reports. The ESORI guidance document describes the key stages of the annual incentives process, including the evaluation criteria and guidance on how we will assess the ESO's performance.

# Consultation on changes to the ESO regulatory and incentives framework scheme for 2020-21

In January, we published our call for input on the proposed changes to the ESO regulatory and incentives framework for 2020-21.<sup>3</sup>

We proposed to make three sets of changes that will take effect from 1 April 2020:

- Streamlining the ESO roles framework from four to three the three streamlined roles are: Role 1: Control centre operations, Role 2: Market development and transactions and Role 3: System insight, planning and network development (see Annex 1). We believed this approach would reduce burden, minimise the scope for overlap in the ESO's reporting and align with the ESO's RIIO-2 framework. We also believed this could facilitate a more tailored approach to the performance evaluation.
- Streamlining how consumer benefits are considered as part of the evaluation criteria

   we proposed to merge the criteria on delivered and future benefits as this would
   help to streamline the ESO's performance reports. The evaluation criteria would
   therefore become:

<sup>&</sup>lt;sup>3</sup> Call for input on 2020-21 ESO regulatory and incentives framework: <a href="https://www.ofgem.gov.uk/publications-and-updates/call-input-2020-21-eso-regulatory-and-incentives-framework">https://www.ofgem.gov.uk/publications-and-updates/call-input-2020-21-eso-regulatory-and-incentives-framework</a>

- a. Evidence of benefits (the ESO would be able to provide evidence of delivered benefits and/or future benefits)
- b. Stakeholder views
- c. Plan delivery
- d. Outturn performance metrics and justifications
- Additional reporting requirements we proposed to permit the ESO to structure its
  reports by the roles described above. We also proposed to introduce a new
  requirement in the ESORI guidance document for the ESO to report on its planned
  internal costs for each role at the forward plan stage and its outturn internal costs in
  the end of year performance report. This will add greater context to the ESO's
  evidence reporting and help to support informed views on how the ESO is being
  ambitious and using its resources effectively to prioritise the right areas.

### Stakeholder responses

We received four responses to our consultation. We have published these responses on our website alongside this letter. We considered all the stakeholder feedback we received to make our decision on the modifications to the ESO regulatory and incentives framework for 2020-21. Annex 2 lists the detailed feedback we received and any further amendments we've made to the guidance documents in response to this feedback.

Overall, stakeholders were broadly supportive of our proposals. The majority of respondents agreed with our proposals to streamline the number of roles from four to three, and in particular, that facilitating whole system outcomes should be an expected behaviour across all roles. All stakeholders supported the proposal to streamline the evaluation criteria.

There was some mixed feedback on the additional reporting requirements, particularly around the proposed reporting requirements related to the ESO's forecasted and outturn costs for each role. Some stakeholders thought this would be beneficial as long as it doesn't create additional burden on the ESO. One stakeholder would prefer the ESO to focus resources on delivering reforms instead of reporting. The ESO fed back that they would be able to provide forecasted internal costs for each role at the forward plan stage, but would not be able to provide robust outturn cost figures in the end of year performance report in May. The ESO noted that robust outturn cost information would only be available in July once it submits its annual Regulatory Reporting Pack to Ofgem.

Our decision

After considering the stakeholder feedback we received to our consultation, we have

decided to proceed with the proposed changes to the ESO's regulatory and incentives

framework to move to three roles and to merge the evaluation criteria on consumer

benefits to streamline reporting. In regards to the ESO's reporting of costs we have decided

that:

• the 2020-21 Forward Plan should include limited cost information (for each role) on

planned cost for 2020-21, forecast outturn cost for 2019-20, and outturn cost for

2018-19; and

• the 2020-21 End of Year Performance Report should include (for each role) a

forecast of the annual 2020-21 outturn cost.

Next steps

The new arrangements will commence from 1 April 2020. The ESO is due to publish its final

Forward Plan for 2020-21 by 31 March 2020. We will review this Forward Plan and the

stakeholder responses to this in order to produce our Formal Opinion for 2020-21. Where

there is sufficient information available, our Formal Opinion will aim to provide a clear steer

on the ambition of the deliverables and performance metrics contained in the plan. This should provide the ESO with clarity on how it needs to perform in 2020-21 in order to

unlock incentive payments and/or avoid incentive penalties.

We appreciate the contribution stakeholders have made so far to scrutinise the ESO's plans

and feedback on its activities over the course of the incentives process.

We will be publishing a call for evidence in due course to gather evidence from stakeholders

of the ESO's performance over the course of 2019-20 which will feed into the end of year  $\,$ 

review that will take place between June and July 2020. If you have any feedback on the

ESO's performance, including both positive examples and areas of concern, you can provide

details of these to us by sending an email to <a href="mailto:ESOperformance@ofgem.gov.uk">ESOperformance@ofgem.gov.uk</a>.

If you have any questions on the contents of this letter, please contact us at the email

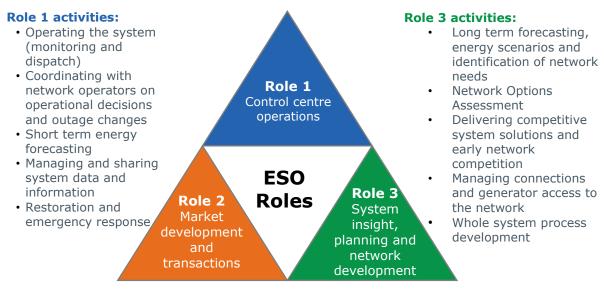

address above.

Yours sincerely,

Maryam Khan

Senior Manager, ESO regulation

### Annex 1 - Summary of the ESO roles and activities for 2020-21

#### Role 2 activities:

- Balancing and ancillary service market design
- Service procurement and settlement
- · Revenue collection
- Policy advice and delivery of market framework changes
- Code administrator

## Annex 2 - summary of responses received and our decision

We have summarised the feedback we received and the changes we have made in response to this feedback below.
