

James Norman,
Head of New Transmission Investment
Ofgem
10 South Colonnade London
E14 4PU

13th August

Dear James,

Consultation on a proposal to modify Special Condition 6I of National Grid Electricity Transmission's RIIO1 electricity transmission licence to implement the Hinkley-Seabank decision

Scottish Hydro Electric Transmission plc (SHE Transmission) welcomes Ofgem's proposal to base output measures on circuit continuous ratings for the HSB project and to ensure that, where appropriate, this is applied to future Strategic Wider Works (SWW) projects.

We agree that local system conditions or works can have a significant detrimental impact on output measures and give a misleading view on a project's delivery if transfer capability is used.

It is our view that using circuit continuous ratings will provide a more accurate view of a project's output.

Yours sincerely,

Sharron Gordon
Regulation Manager
