

Dear Sir/Madam

I would like to put my views across about the Shetland Transmission consultation

I strongly object to this project going ahead and Shetland needs to be excluded from wind farm developers

As for the cable it will be routed down the Kergord and Weisdale Valley and onto the Weisdale Voe this is one of the most scenic place's in Shetland and this side of the project will cause a lot of damage to land but more so to the people that have to make a living from Fishing and Fish/Shellfish Farming and from this it would be very damaging to our local seafood industry which is renowned worldwide.

As for the Windfarm this project has no place in Shetland for it is far to large for this Island some Turbines are to close to house's and the village of Aith some property's are less than the remained 2KM from a turbine. No health study has been carried out on the health and wellbeing of residents that will be living nearby to this Turbines and as well there are no proof or real study on how this will affect wildlife before and after construction as this is going to involve moving a unthinkable volume of peat and it is proven that peat is a carbine sink and to disturb the peat will do more harm than good.

Shetland Power needs to be small scale for our Island use ie a small windfarm less than 10 turbines in a place that would be suitable or work more on tidal or wave power we as Shetlanders know a lot about the sea and tides and how it work's and have this backed up with a Gas powered station build in a suitable place and their would be no need to build a large windfarm and lay a cable from Weisdale to Scotland.

I would like thank you on reading this email and note MY OBJETON TO THIS PROJECT
