

Dear Sir or Madam,

I hereby object to the proposed wind farm being build in Shetland. This project would have a hugely negative impact on the area. There have been landslides in the past and working on this unstable ground would just cause even more of this. Moreover, the devastation large scale building work like this would cause to flora and fauna here, is incredible. The cost of building on such unstable ground and tracks to get heavy machinery and windfarm parts onto these hills would just have to be carried by the consumer with massively increased energy prices. Additionally, I don't believe this project to be environmentally friendly at all for all the aforementioned reasons. Shetland would be far better suited to less intrusive energy generation like tidal or wave power. Tourism is a very important source of income for the Shetland community and large scale industrialisation of our hills, would cause a decline in tourism which would severely impact on a large part of the Shetland population. Please rethink the this windfarm and consider stopping it altogether.

Kind Regards,
