

To whom it may concern,

I object strongly to the proposed wind farm being built in Shetland. The impact this will have in an area where there are valuable peat banks, rare birds nesting, rare flowers growing will be devastating. I am born and raised in Shetland and only recently left. I know that tidal power would be much more effective than this disgrace of a wind farm.

The proposed area for the wind farm has already seen natural landslides in recent years. Digging into this unstable ground will be catastrophic, lead to more landslides and emissions.

Please rethink this decision, I never want to return to Shetland again if this project is developed.

Yours faithfully
