

I am writing to voice my concerns about the proposed Windfarm in Shetland. This massive project will result in the destruction of peatland, destroy the scenery, be detrimental to wildlife and birds all of which make Shetland the unique and special place it is. No longer will Shetland appeal to tourists. Why would anyone want to come and see a massive wind farm built against the wishes of the residents of Shetland who have never had the opportunity to vote against it. Shetland will never again be listed amongst the top ten places of 'The Lonely Planet' to visit, if this monstrosity is erected.

We are told this is green energy but it cannot be when it destroys peat moorland releasing tonnes of Co2 into the atmosphere and the transportation required in the construction will exacerbate the release of more carbon into the atmosphere.

I object to the proposed SSEN interconnected cable from Scotland to Shetland at an estimated cost of £709 million.

A Danish firm have proposed building a LNG (liquefied natural gas) Plant at a fraction of the cable's cost. Please give this serious consideration.

Please keep Shetland the special place it is.
