

To whom it may concern,

I object to the proposed wind farm being built in Shetland. The impact this will have in an area where there are valuable peat banks, rare birds nesting, rare flowers growing will be devastating. I am born and bred in Shetland and know that tidal power would be much more effective than this disgrace of a wind farm.

The proposed area for the wind farm has already seen, natural landslides in very recent years. Digging into this unstable ground will be catastrophic and only lead to more landslides.

Please, please rethink this wind farm site.

Yours faithfully
