

To whom it may concern

I am writing to you in objection to the massive monster windfarm that is due to spoil Shetland forever.

Please reconsider this project it is far too big and destructive for our islands. The vast majority of the islands are dead against a project of this scale and magnitude. We have a delicate eco system in the peat moors that will be forever lost should this go ahead. The carbon releases from the moorland will outstrip the output from the farm.

I am not against wind power i feel it is definitely part of our future but I feel this project should be massively down scaled. Please consider reinvesting the funds for offshore projects, wind or tidal!

I have lived in Shetland my whole life and my family has lived there for 100s of years. I don't want to witness the destruction of my island home

Yours faithfully
