

Dear Mr Norman

Please accept this email as an objection to the SSEN application for the inter connector cable and windfarm on Shetland.

The absolute devastation and destruction to Shetland, that will be caused, to accommodate 103 giant windmills is unthinkable. The damage this will cause cannot be reversed. The impact this will have on our thriving wildlife, plants and precious peat land I believe will have a serious impact on our environment. You just have to walk through the hills to see and hear the vast species of birds, plants, insects and bees. What will happen when their natural habitat is torn to pieces.

Why choose this project at an astronomical cost, not just money wise, but the detrimental cost to Shetland itself when solutions such as tidal power would be a better option. Shetland is not big enough to accommodate a giant windfarm and nor does anyone here want to live on a giant windfarm. Also at what cost to our health as there are various studies to show the impact living near windmills can have.

Shetland is unique, untouched and beautiful being a huge tourist attraction. What will it do for our tourism sector when our Island has been carved up and changed forever beyond repair.

I object to this project this is not suitable for Shetland, this does not benefit Shetland and I believe it will have detrimental consequences for all who live here. Please do not let our Island be destroyed.

Regards
