

Gas Network Innovation Competition Full Submission
Supplementary Answer Form

Project: Commercial BioSNG Demonstration Plant

Tick if this answer has been provided verbally: ☐

Project code	NGGDGN02/1	Question Number	25
Question date	15/9/15	Answer date	17/9/15
Submission section question relates to	General		
Topic			
	Following up on Q&A 10, has any stakeholder engagement been carried out with the NTS to understand what wider costs/benefits might be even if they have not been quantified?		
Notes on question			
Answer	<p>No formal engagement with NGGT has been carried out to date, in line with our previous response.</p> <p>However, NGGD have spoken to NGGT informally regarding this project. At this early stage in the project, they have not yet performed any analysis on their network. Therefore have no further information to inform the response.</p> <p>As previously stated until the locations of the BioSNG plants begin to become clearer the potential savings are very hard to quantify in any detail. With the timeline of ramp up in production to levels that are sufficient to impact the NTS, the changes that could drive cost savings are around 2030 onwards post RII02. Over time if these plants reliably delivered gas to our networks that it may reduce or remove the need for NTS reinforcement in the future and/or the operational costs relating to compression.</p>
