

Electricity Network Innovation Competition Full Submission
Supplementary Answer Form

Project: EVOLUTION

Tick if this answer has been provided verbally: ☐

Project code	SPD/EN/01	Question Number	25
Question date	10 September 2015	Answer date	11 September 2015
Submission section question relates to	Page 18		
Topic	Carbon Plan		
Question	Please explain which parts of the Carbon Plan you are seeking to address		
Notes on question			
Answer	<p>The carbon plan is committed to increasing the penetration of renewable generation and low carbon technologies connecting to the network. Through projects like EVOLUTION which is building upon earlier projects such as those involving demand side response and active network management, but brining them together in the context of a local balancing market, we will continue to create new opportunities for maintaining the increase and penetration of renewable generation technologies and make better use of their output rather than reducing their impact by turning them down or off.</p> <p>In addition the political landscape following the recent general election has changed focus with the reduction in subsidies and financial support for many of those technologies that will help meet the UKs ambitions for reducing carbon and by creating new markets through local Balancing Services and increasing the opportunities for a wider penetration of service providers to access those opportunities project EVOLUTION will continue to facilitate the penetration of renewable generation and low carbon technologies.</p>
