Project code	NGGTGN03	Question Number	2
Question date	25/08/2015	Answer date	27/08/2015
Submission section question relates to	Section 2: Project Description 2.2. Technical description of Project		
Topic			
Question	The project aims to reduce costs to £1million (page 8) with timescales less than 1 year. How has this target been set what evidence is there that it is achievable?		
Notes on question	N/A		
Answer	<p>The target for this innovation project is to reduce the cost to less than £1m.</p> <p>The cost of a construction project is largely driven by the project duration. By developing standardised designs which utilise existing assets we will reduce the overall timescales of a project and in turn reduce the total project cost.</p> <p>The skid mounted unit will be designed using the best available technology, prefabricated and transported to site. The skid will be above ground rather than below ground, saving extensive civil works.</p> <p>With this upfront investment we believe this target of less than £1m is achievable. However, how far less than this figure we do not know how much below this figure at this stage.</p>
