

Gas Network Innovation Competition Full Submission
Supplementary Answer Form

Project: CLoCC

Tick if this answer has been provided verbally: ☐

Project code	NGGTGN03	Question Number	28
Question date	22/09/2015	Answer date	24/09/2015
Submission section question relates to	b) Value for money		
Topic			
Question	Following up on Q&A 5, under the existing commercial framework the reduction in cost of connection would be passed in its entirety to the developer (who is a customer). Any impact on the end customer (consumer) is not defined. Please can you provide additional information?		
Notes on question	N/A		
Answer	We would expect the £100m saving to be reflected in gas prices and passed onto UK consumers. This saving would not appear within NTS network charges. In addition, this project should facilitate more indigenous gas which should lower/stabilise wholesale gas prices.
