

Gas Network Innovation Competition Full Submission
Supplementary Answer Form

Project: _____

Tick if this answer has been provided verbally: ☐

Project code	NGGTGN03	Question Number	15
Question date	21/08/2015	Answer date	01/09/2015
Submission section question relates to	1.4.4. The benefits of the Project.		
Topic			
Question	Why would costs for connecting new unconventional sources not reduce over time as part of NGG's business as usual approach to running an efficient an economic network?		
Notes on question	N/A		
Answer	We would anticipate that costs would reduce over time as we take the learning from each connection and apply to the subsequent connections, in addition to reviewing our approach on each occasion. However, this will only lead to incremental improvement. Our innovation project will deliver a step change in cost and duration by challenging, exploring and developing leading edge solutions in every aspect of the connections process.
