

Proposal for a Capacity Market Rules Change

Making a positive difference
for energy consumers

Reference number (to be completed by
Ofgem): CP181

Name of Organisation(s) / individual(s):
E.ON

Date Submitted:
11/11/16

Type of Change:

- Amendment
- Addition
- Revoke
- Substitution

Proposal summary (short summary, suitable for published description on our website)

CMUs which form part of sites which receive low carbon support should still be able to participate in the CM provided the CMU in question does not receive low carbon support.

What the proposal relates to and if applicable, what current provision of Rules the proposal relates to (please state provision number):

Rule 3.4.7 requires CMUs to declare that they are not accredited under a Low Carbon Exclusion.

Description of the issue that the change proposal seeks to address:

Low Carbon Exclusions often apply to entire sites even if only a proportion of that site actually benefits from that Low Carbon Exclusion. The CM Rules allow sites to nominate metering behind a Grid Connection to participate in the CM. Where such sites share a grid connection meter with a non-CM site with a low carbon exclusion, it should be possible for the portion of that site not benefiting from the low carbon exemption to participate in the CM.

If applicable, please state the proposed revised drafting (please highlight the change):

Rule 3.4.7 should be updated to allow CMUs which form part of sites which benefit from Low Carbon Exclusions but do not themselves benefit from Low Carbon Exclusions, to participate in the CM.

Analysis and evidence on the impact on industry and/or consumers including any risks to note when making the revision - including, any potential implications for industry codes:

This currently represents a barrier to smaller embedded generators or DSR from participating in the CM. Currently the only way to participate for such sites is to install new and expensive additional metering.

Details of Proposer (please include name, telephone number, email and organisation):
