

**Liverpool City Council: Consultation Response 16.02.17
OFGEM Energy Company Obligation 2017-2018 (ECO2t): ECO2t consultation Part 2**

1. Do you agree that an LA declaration should be dated prior to the date of installation of the measure?

- a) We agree with the general principle of this, however the Local Authorities are required to report on the numbers of measures installed under Flexible ECO. If declarations are given to companies before installation there needs to be a requirement to confirm a measure or measures have been installed built into the local authority procurement procedures*

2. Do you agree with our proposed administration of SWI in-fill?

- b) We agree on the whole; however, the percentage minimum assessment, and individual household assessments should stand, even if there is a change in circumstances between the date of assessment and completion of install. For clarity it should be specified that any assessments and calculations which take place between now and the end of the transition period would be acceptable for making a declaration, and if this provision carries on into ECO3 a specified time where assessments remain valid should be consulted on.*
- c) We would like clarity on SWI in-fill with regard to whether a project would be able to proceed if 66% are eligible but 1 household that is FP or LINC eligible refuses measures.*

3. Do you agree with our proposed administration of evidencing that the Local Authority has published a Statement of Intent (Sol) and that it includes the minimum required information?

- d) We agree; however it is important that previous Statements of Intent should be available on request to avoid extra web based resource needs and public confusion.*
- e) In addition we believe that the initial Sol should be approved by OFGEM before publication to confirm that it meets the minimum requirements of the policy.*
