

Electricity Network Innovation Competition Full Submission
Supplementary Answer Form

Project: Optimise Prime

Tick if this answer has been provided verbally: ☐

Project code		Question Number	29
Question date	27/09/18	Answer date	02/10/18
Submission section question relates to			
Topic			
Question	Please expand upon how the project outcomes will feed into RIIO-2 business plans.		
Notes on question			
Answer	<p>We are still at the early stages of our RIIO-2 planning. However based on Ofgem's indicative time table for the gas distribution companies we currently expect to be submitting our final Business Plan to Ofgem in approximately Q4 2021. With this date in mind, our current expectation would be that the commercial EV six month data would be an input into our load forecasting model to help us understand the impact on the network. The planned delivery of this data in Q4 2020 would allow us to undertake analysis and also to engage with our stakeholders, including our Customer Engagement Group, through early/mid 2021 to get their feedback, both on our analysis and the implications for network requirements in RIIO-ED2. We would then expect to be able to use the full 12 month data to refine this analysis before the submission in Q4 2021. We expect that the data we get from the profiled connections trial in Q2 2020 would allow us to include it, if the trials are successful, within our solution portfolio for RIIO-2.</p>
