

Electricity Network Innovation Competition Full Submission
Supplementary Answer Form

Project: Optimise Prime

Tick if this answer has been provided verbally: ☐

Project code	UKPNEN03	Question Number	17
Question date	30/08/2018	Answer date	03/09/2018
Submission section question relates to	Section 9		
Topic	Deliverables		
Question	Please provide additional information explaining how you decided the proposed level of evidence proposed for each project deliverable is appropriate. For example, for some deliverables you could have proposed commissioning documentation as part of the evidence.		
Notes on question			
Answer	<p>Our aim in designing the deliverables was to specify key reports (or specific data outputs) that would benefit the industry by enabling a clear understanding of the learnings and recommendations generated by the project. We believe that incrementally releasing learnings throughout the project is important given the fast developing nature of the electric vehicle market.</p> <p>To present the learnings from the trials, the commissioning of the project's systems must have been completed and should there be any deviation from the plan this will be noted in the relevant learning report.</p> <p>It is unlikely to be possible or beneficial to the industry to release large amounts of internal project documentation. However, these documents will be held internally and where possible will be made available upon request to other GB DNOs, and other parties for auditing purposes. This will be clearly stated in the relevant reports.</p> <p>We will be providing, in the form of a report, key learning points from the installation, commissioning and testing processes/activities.</p>
