Dear Stakeholder

Feed-in Tariff (FIT): dormant applications

As of 1 April 2019, the FIT scheme closed to all new applications. Installations which applied for accreditation or pre-registration prior to the closure of the FIT scheme must provide information that Ofgem deems necessary to access the accreditation application and demonstrate that the station has commissioned before the station can be granted accreditation under the Feed-in Tariff Order¹.

Ofgem has a significant number of applications it considers as 'dormant' where generators have not responded to previous requests for information which Ofgem considers necessary in order to assess the application. In the absence of this information we are unable to progress the application to make a determination on the eligibility of the installations in question. We do not consider it to be in the interest of good administration for these dormant applications to remain unresolved without progressing further.

Ofgem's approach

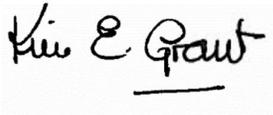

Ofgem will adopt a minded to refuse approach in order to deal with the remaining dormant applications. Where Ofgem considers that the further information on the outstanding matters is necessary for the purpose of determining eligibility in respect of a dormant application, we

¹ The Feed-in Tariffs Order 2012; Found here: <http://www.legislation.gov.uk/ukSI/2012/2782/contents>

will now issue a final request for information. Any deadlines (where applicable) will be clearly specified in Ofgem's requests for further information. Failure to provide the requested information within that period may result in the application being rejected.

If you have any concerns about an application please contact us at dormant@ofgem.gov.uk.

Yours sincerely
