

# Feed-in Tariff Quarterly Report June 2020 (Issue 40)

**Welcome to our Quarterly Report, bringing you information about the Feed-in Tariffs (FIT) scheme.**

This report summarises statistics for the final quarter of FIT Year Ten (1 January – 31 March 2020) and FIT activity since the start of the scheme. The statistics in this report are based on information held on our Central FIT Register.

We value your feedback. Please contact us with any comments or suggestions.

## **FIT statistics for the final quarter of FIT Year 10 (1 January – 31 March 2020)**

Here are the latest quarterly statistics for the Feed-in Tariff scheme:

- There were a total of 1,735 FIT installations registered during the fourth quarter of FIT Year 10, continuing the downwards trend of registrations expected.
- Even though the number of registrations almost halved from the previous quarter, the Total Installed Capacity (TIC) accredited stayed relatively unchanged, with 20.7MW installed against the 21MW of previous quarter.
- In response to the unprecedented circumstances faced by prospective FIT generators at this time, the government has amended the Feed-in Tariffs Order 2012, granting extensions to validity periods for all preliminary accreditations and pre-registrations for community energy solar photovoltaic (PV) installations which expire between 1 March and 30 September 2020.
- £320,425,965 of FIT Export and Generation payments were claimed this quarter. The levelisation fund totalled £311,292,547.68, an increase of 6.4% (or just over £18.8m) compared to the same quarter in Year 9.
- 867,912 installations and 6,357 MW of TIC have been accredited as of 31 March 2020.

### **Quarter 4 of FIT Year 10**

#### **Accredited installations by technology type**

Of the 1,735 installations accredited in this quarter, just over 1% are non-PV technologies. However, non-PV technologies combined account for just over 22% of the new capacity installed due to a large percentage of new PV capacity comprising of small domestic installations, as well as the higher on average TIC of hydro installations for this quarter.

#### **Total Installed Capacity by technology type**

The total accredited capacity totalled 20.7 MW this quarter. This represents 0.32% of the TIC of the scheme.

The breakdown of capacity per technology accredited since the scheme began is as follows: Anaerobic Digestion - 4.61%, Hydro - 3.56%, Micro CHP - 0.01%, Solar PV - 79.96% and Wind - 11.86%.

## Regional breakdown of FIT activity

Installations in England make up 85.98% of the total number of accreditations. Installations in Scotland and Wales amount to 7.5% and 6.52% of total accreditations, respectively.

The largest proportion of TIC lies within the South West, remaining at a total of 18.48% (1.15 GW), followed by Scotland with 12.25% (0.76 GW) of the total capacity installed to date.

## Other news and updates

### Ofgem Schemes on Twitter

We provide updates and scheme information via Twitter. We publish regular articles providing news and updates for stakeholders, as well as up-to-date data and statistics covering the schemes we administer. You can follow us on Twitter at [@ofgem\\_schemes](#)

### Changes to the FIT Scheme – Coronavirus (COVID-19) Update

The government has amended the Feed-in Tariffs Order 2012. The amendment Order provides extensions for those most immediately affected by the Coronavirus. The government recognises that validity periods for some preliminary accreditations expire after 30 September 2020 and will keep the situation under review. The full text of the amendment can be found here: [Feed-in Tariffs \(Amendment\) \(Coronavirus\) Order 2020](#).

### Ofgem information for energy licensees on coronavirus (COVID-19) response

We have published an update for licensees explaining how we will focus our activities on the most time-critical work we carry out for consumers during the coronavirus crisis. Find out more on [the Ofgem website](#).

## FIT Levelisation

The levelisation process for Quarter Four was completed on the 25th of May 2020. Licensed electricity suppliers reported a total of 73,027,013.3 MWh of electricity supplied during this period, of which 4,930,284 MWh was exempt, 2,701,016 MWh due to being renewable electricity sourced from outside of the UK (after exempt supply cap had been applied) and 2,229,268 MWh due to being exempt supply to Energy Intensive Industries. The cap on exempt electricity sourced from outside of the UK (2,701,016.269 MWh) was breached for this quarter.

The levelisation fund totalled £311,292,547.68 with £305,604,212.79 claimed in FIT generation payments. The levelisation fund decreased by around 11.6% from the previous quarter, but is 6.4% higher than the same quarter in Year 9.

## **FIT Levelisation Payments**

During Quarter Four of FIT Year 10, one supplier failed to make their levelisation payment by the deadline of 14 May 2020.

The supplier listed below failed to make their levelisation payments by the deadline of 14 May 2020:

<b>Supplier</b>
Orbit Energy Limited

Late and missed payments are incidents of non-compliance and will be added to the Supplier Performance Report.

## **About the Feed-in Tariff Scheme**

The FIT scheme is a government programme introduced on 1 April 2010, designed to promote the uptake of small-scale renewable and low-carbon electricity generation technologies. We administer the scheme on behalf of the Department for Business, Energy & Industrial Strategy, who is responsible for the FIT scheme policy and legislation.
