Dear Shilen,

**Proposal to modify electricity transmission licences to reflect the latest version of the National Electricity Transmission Security and Quality of Supply Standard (NETS SQSS)**

SP Energy Networks (SPEN) represents the transmission licensee SP Transmission plc. We own and maintain the electricity transmission network in Central and South Scotland (SP Transmission). Through our participation in the SQSS Review Panel, the GSR027 Workgroup and in our responses to the GSR027 Workgroup and Code Administrator Consultations, submitted on 30 September 2020 and 6 November 2020 respectively, we have shared our views on GSR025, GSR026, GSR027 and the latest update of the SQSS.

SPT agree with both modifications for GSR025 and GSR026. We note that Ofgem have taken our reservations about GSR027, as expressed in our 30 September 2020 and 6 November 2020 responses, into account. We now look forward to working constructively with Ofgem, the ESO and other industry stakeholders in ensuring the effective implementation of the new FRCR process.

Yours sincerely

Dr. Cornel Brozio
